## Assembly instructions

2 x feet (A), 2 x telescopic upright poles (B), 2 x top rail poles (C) and 2 x bottom rail poles (D), 4 x pole screws (E) and 2 x foot screws (F).

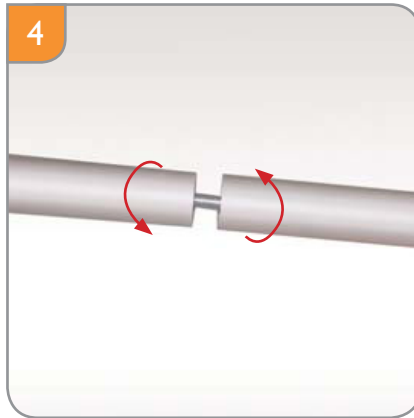

Insert a telescopic upright pole (B) through one foot (A) and tighten supplied screw (F) with screwdriver to secure fit.

Make sure that the mounting hole is facing the long side of each foot. Repeat step 1 and 2 with the other foot and pole.

Locate the two top poles (C) and two bottom poles (D) which are labelled accordingly.

Twist the two top poles together (with the writing appearing at either end). Repeat for the bottom poles.

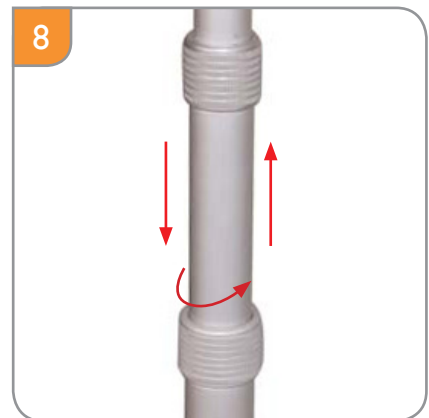

Slide the top pole through the looped graphic and adjust length of pole so that at least 50mm is sticking out either end.

Take one of the pole screws (E) and screw through the upright and into the top rail. Repeat for other end.

Slide bottom pole through the bottom of the looped graphic and attach to both uprights with pole screws.

To adjust the height of the upright poles so that the graphic fits, twist and pull out each pole as indicated. Twist in the opposite direction to secure.
